

## Figure Your Price!

### How much money can you save in a year?

You can estimate the price for sterilization by E-BEAM Services for your box size using this chart:

#### Assumptions:

1. The beam can penetrate the box and give your product an acceptable max/min dose range. This usually works for low to medium density products. We can help you estimate this, and we will confirm it with a formal dose distribution study.
2. The product materials are radiation sterilizable. (If it works with gamma, it will work with e-beam.)
3. The range of pricing shown is for truckload-quantity shipments. The price could be about 10% higher for shipments of 10 to 15 pallet loads. Smaller loads are welcome.
4. The minimum dose is 25kGy. A lower or higher dose won't change the price much.
5. We can optimize the price depending on your turnaround time requirements and other preferences.
